In the mathematical footsteps of the young Laurent Gruson

C. Gruson

Trez-Hir, 30 Mai - 03 juin, 2022

Laurent Gruson first worked in p-adic analysis, before writing a well-known paper with Michel Raynaud on rigid geometry. The aim of this talk is to understand how his mathematical interests evolved in the first 10-15 years of his mathematical career, before the beginning of his collaboration with Christian Peskine (and before projective geometry became his favourite topic).
